

Infosim® StableNet® Appliance

**Infosim® StableNet® Software
on ready-to-run systems platform**

Infosim® StableNet® Appliance

The Infosim® StableNet® Appliance is a high-performance, pre-configured security-hardened, hardware platform designed to support flexible deployment of StableNet® - the leading Performance, Fault and Configuration Management solution for Enterprise, Telco and Service Providers. StableNet® Appliances reduce total cost of ownership by simplifying deployment, consolidating network infrastructure, providing a platform that can scale with your organization and is optimized for StableNet®.

Configuration Options

The Infosim® StableNet® Appliance can be configured in many different ways, and the individual modules of StableNet® are freely combinable. The following graphics show some typical deployment examples. The light grey boxes are representing the appliance hardware.

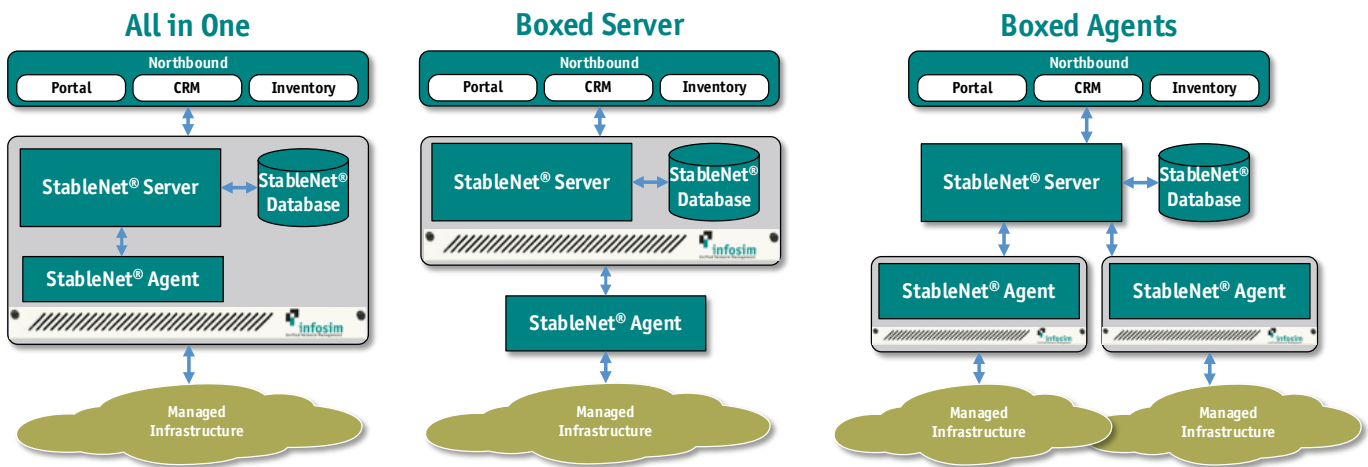

Figure 1: All in One
StableNet® Server, StableNet® Database and StableNet® Agent in one box.

Figure 2: Boxed Server
Only the StableNet® Server and StableNet® Database are installed.

Figure 3: Boxed Agents
The StableNet® Appliance houses the StableNet® Agent only.

<p>Selectable StableNet® Versions:</p> <ul style="list-style-type: none"> StableNet® Telco (for Telecom Operators and ISPs) StableNet® Enterprise (for Corporations) 	<p>Selectable StableNet® Functional Modules (Licenses):</p> <ul style="list-style-type: none"> Various modular functions licenses are available: <ul style="list-style-type: none"> Unified management solutions for Fault, Performance Management, Root Cause Analysis, Infrastructure Discovery/Inventory, Reporting, Multi-Client Reporting etc. Network Change & Configuration Management Specific technology support modules Selectable functional software configurations (selected by license switch)

Appliance Sizing, Database and OS Options

Sizing and StableNet® Appliance performance, and thus maximum number of measurements depend e.g. on type of measurements, number of Flows processed, number of xDR events, complexity of processing etc., a rule of thumbs is around 100,000 measurements per box. Database and storage load depends on performance and event data recorded and aggregated.

Please contact your StableNet® partner or us about specific StableNet® configurations and measurement sizing.

Available database software & license options:

- Embedded Oracle® (EL with Partitioning) or
- Oracle MySQL®

Deliverable/supported operating system & licenses:

- CentOS 7 (free RHEL clone)
